

The National Park Foundation (NPF) and National Park Service (NPS) are excited to announce the Scientists in Parks (SIP) Fellowship Program, funded through the generous support of Karen and Brian Conway, the Heising-Simons Foundation, as well as the Glenn W. Bailey Foundation.

Six postdoc Fellows will be selected to embark on innovative science research starting Spring 2024. In collaboration with parks, the incoming cohort of Fellows will conduct innovative research that makes a meaningful impact on the preservation of America's parks. Pivotal research findings will inform future management actions taken by the NPS and other natural resource agencies and advance regional, national, and global conservation.

The SIP Fellowship Program seeks motivated and passionate postdoc scholars interested in conducting urgent scientific research that will advance natural resource stewardship across the National Park System. We encourage interested candidates and sponsoring institutions to apply now until January 28, 2024. For more information and to apply visit: go.nps.gov/sipfellowship.
